# Gut microbiota and aging

---

## Context

Recent studies suggest that the gut microbiota changes with age and could be involved in age-associated diseases and conditions.

It is therefore tempting to hypothesize that nutrition could modulate the gut microbiota, subsequently influence the immune system and finally impact on age-associated diseases and conditions.

## Aims

To create a group of physicians/scientists/health professionals/industrials interested by the nutritional modulation of the gut microbiota and its impact on energy metabolism.

## Public

Professionals (physicians, scientists, dietiticians, nurses, pharmacists...).

## Language

All presentations will be in English.

## Organisers

L. Genton, J. Schrenzel

## Scientific committee

G. Greub, F. Pralong
